PROFILE SUMMARY

Software developer with hands-on experience in full-stack web applications and AI-powered systems. Proficient in Python, JavaScript, React, and backend development with a strong focus on LLM integration, NLP pipelines, and scalable architecture design.

EDUCATION

Bachelor of Technology (Computer Science and Engineering) 2023 – 2027

Chandigarh Group of Colleges, Jhanjeri | CGPA: 8.6

Diploma in Mining Engineering 2023

Keonjhar School of Engineering

Secondary School Education (Class X) 2019

Senior Secondary D.A.V Public School, Gua | Percentage: 78.6%

PROJECTS

Horizon – Personality Development Web Application

- Built a platform that recommends videos based on a user's personality score to improve emotional intelligence, empathy, and resilience.
- Automated metadata generation using Gemini API — tagging each video with content type, emotional themes, and age suitability.
- Local LLM (LLaMA 3.1 8B / MyQwen 7B) selects videos per session and updates the user's personality score after evaluating post-session reflection answers.
- Grading system scores videos by trait relevance; built-in AI chatbot provides coaching and guided reflection between sessions.
- Runs on local environment; deployment pending.

Tech Stack: Python, Flask, React, Tailwind CSS, LLaMA 3.1 8B, MyQwen 7B, Gemini API, JavaScript

AI Summarizer – Legal & Government Document Analyzer

- Web app that summarizes long government and legal documents using a 9-level NLP pipeline with full source traceability.
- Risk detection engine flags harmful or ambiguous clauses in T&C and legal contracts before user agreement.
- Every summary line, bullet point, and chatbot response links back to its exact source passage in the original document.
- AI chatbot answers document-specific queries; FAISS indexing enables fast semantic search over large files.
- Google OAuth authentication and MongoDB for session and index persistence.

Tech Stack: Python, Flask, React (TSX), Tailwind CSS, FAISS, MongoDB, Cloud LLM APIs, Google OAuth, JavaScript

Travel Planning App – Budget-Optimized Trip Planner

- Generates optimized travel itineraries based on budget, preferred destinations, activities, and available holidays.
- C++ route optimization engine calculates inter-destination distances via Map API and determines the most cost-efficient travel order.
- Day-wise itinerary output includes hotel recommendations, activity scheduling, and a full budget breakdown.
- Map API integration visualizes routes and distances; JSON dummy datasets used for destination and hotel data.

Tech Stack: C++, Node.js, JavaScript, HTML5, CSS3, Map API, JSON

SKILLS

Technical: Python, JavaScript, React, Tailwind CSS, Node.js, Express.js, Flask, C++, Java, HTML5, CSS3, Git, GitHub, MySQL, MongoDB, FAISS, REST APIs

AI / LLM: LLaMA 3.1 8B, MyQwen 7B, Gemini API, Cloud LLM APIs, FAISS Indexing, NLP Pipelines, Prompt Engineering

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

Soft Skills: Leadership, Problem Solving, Teamwork, Communication, Adaptability, Time Management

ACHIEVEMENTS / PARTICIPATION

- Solved 200+ coding problems across LeetCode, GeeksforGeeks, and CodeChef.
- Maintained a 100+ day coding and GitHub contribution streak.
- Earned 43+ badges on FutureSkills Prime.
- Participated in multiple hackathons and workshops, building practical solutions under time pressure.

CERTIFICATIONS

- **CompTIA BDMS** — CGC Jhanjeri
- **IoT & Robotics using Raspberry Pi** — CGC Jhanjeri
- **CompTIA Java** — CGC Jhanjeri
- **Introduction to MongoDB** — MongoDB University
